P5 left

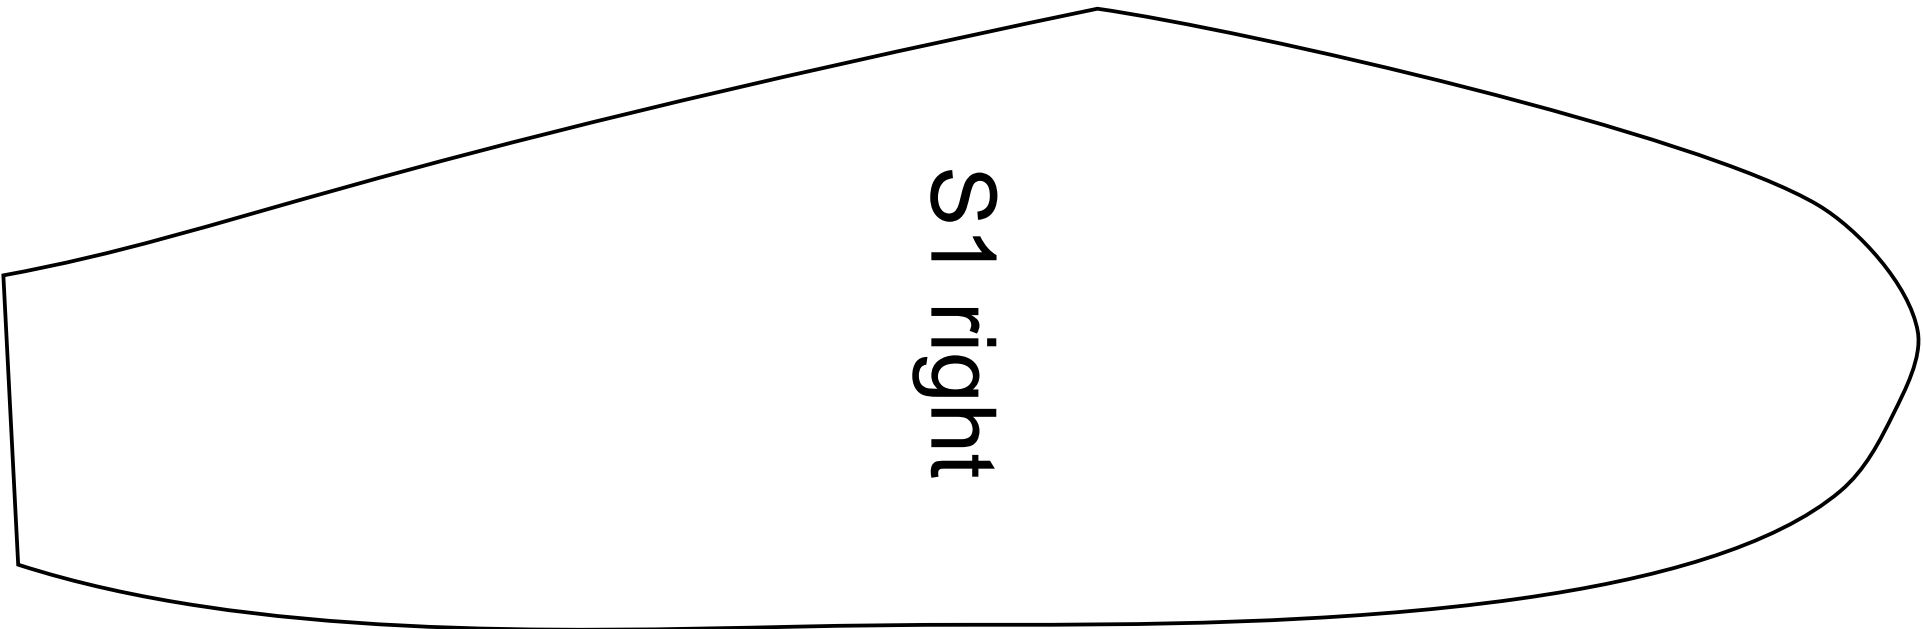

P5 right

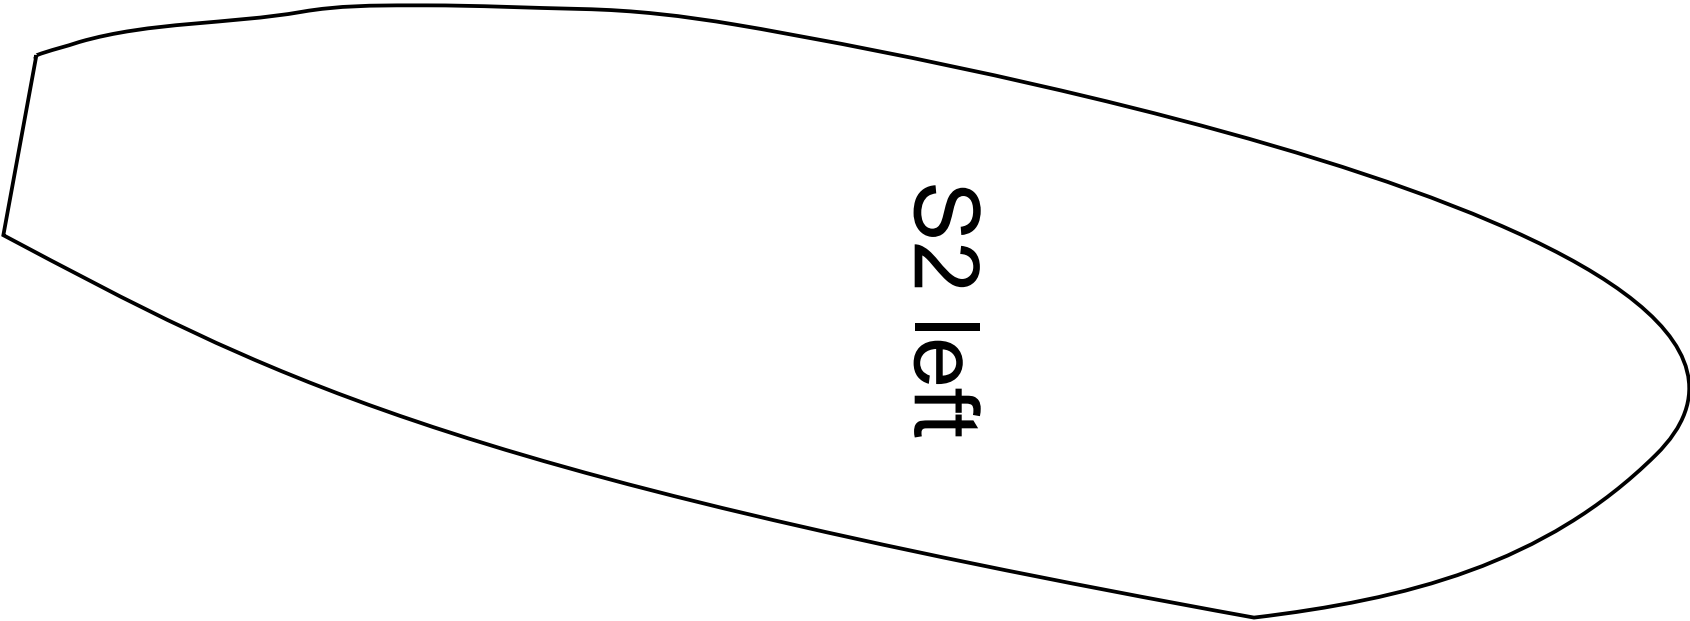

A diagram of a shoe pattern for the left foot. The pattern is an elongated, asymmetrical shape with a rounded toe on the right and a small rectangular tab on the left. It is oriented horizontally.

S1 left

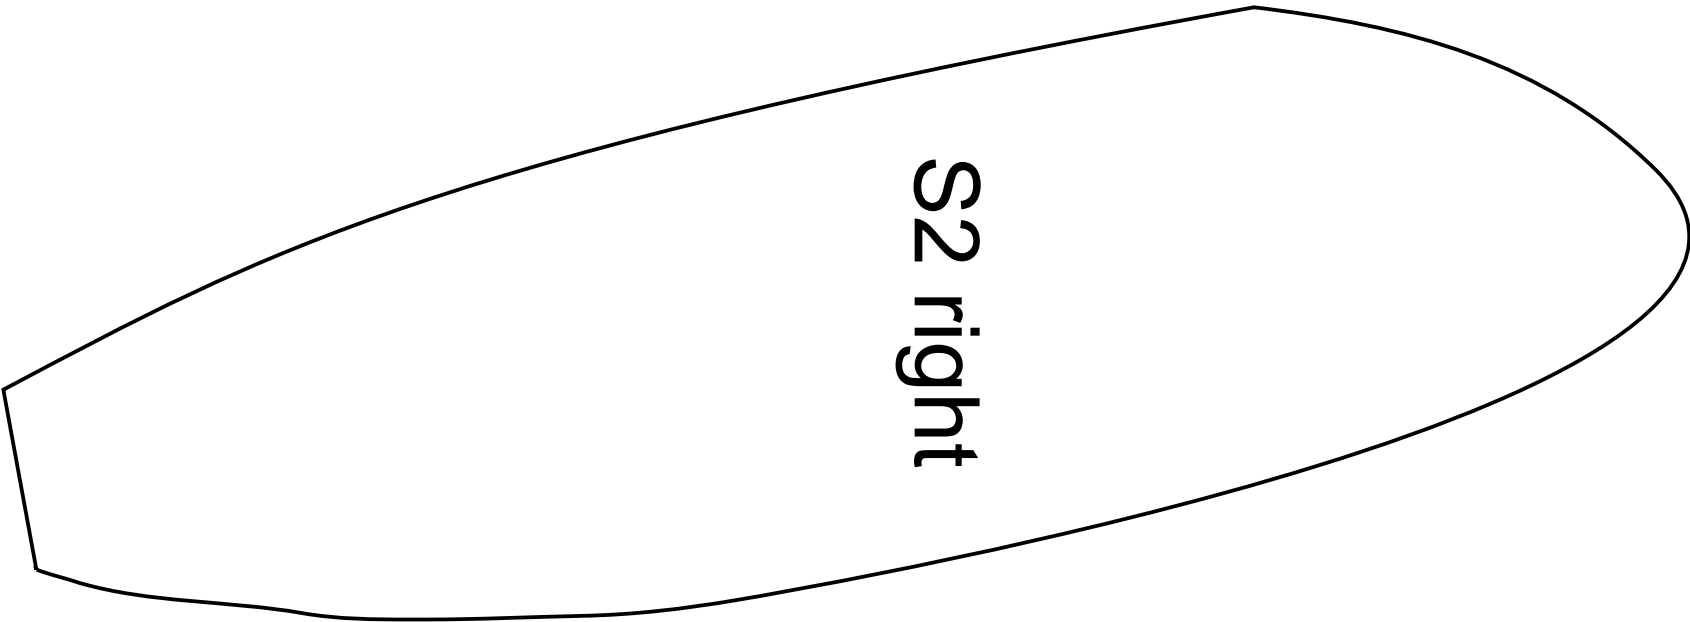

A diagram of a shoe pattern for the right foot. The pattern is an elongated, asymmetrical shape with a rounded toe on the left and a small rectangular tab on the right. It is oriented horizontally.

S1 right

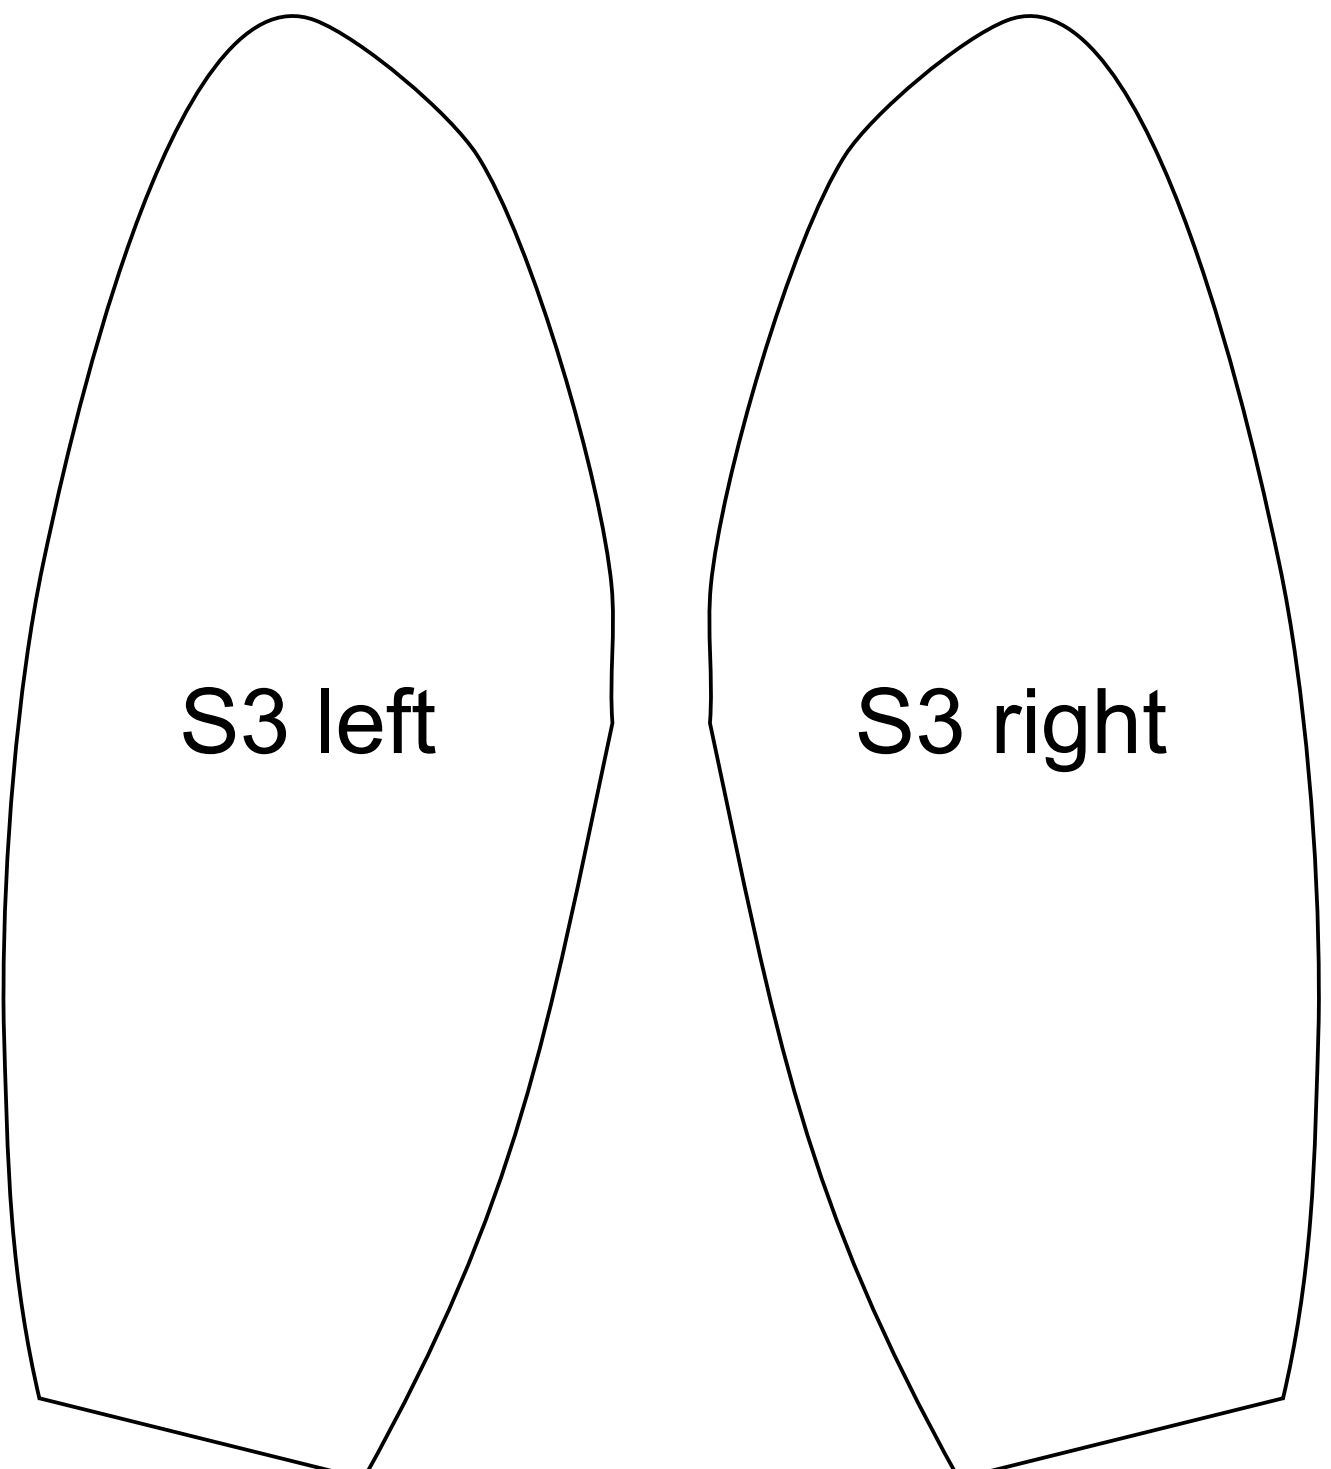

A diagram of a left ventricle cross-section, oriented vertically. The shape is elongated and somewhat triangular, with a rounded apex at the top and a wider base at the bottom. The interior is white, and the boundary is a solid black line.

S2 left

A diagram of a right ventricle cross-section, oriented vertically. The shape is elongated and somewhat triangular, with a rounded apex at the top and a wider base at the bottom. The interior is white, and the boundary is a solid black line.

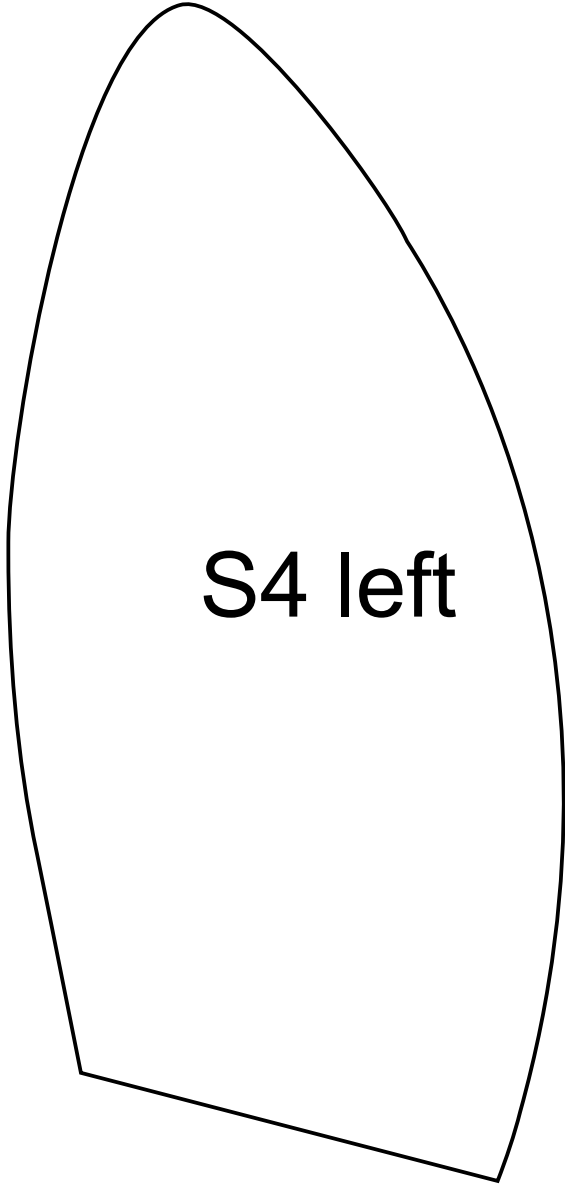

S2 right

The diagram consists of two identical, vertically oriented, teardrop-shaped regions that overlap in the center. Each region is outlined with a thin black line. The left region is labeled 'S3 left' and the right region is labeled 'S3 right'. The labels are centered within their respective regions.

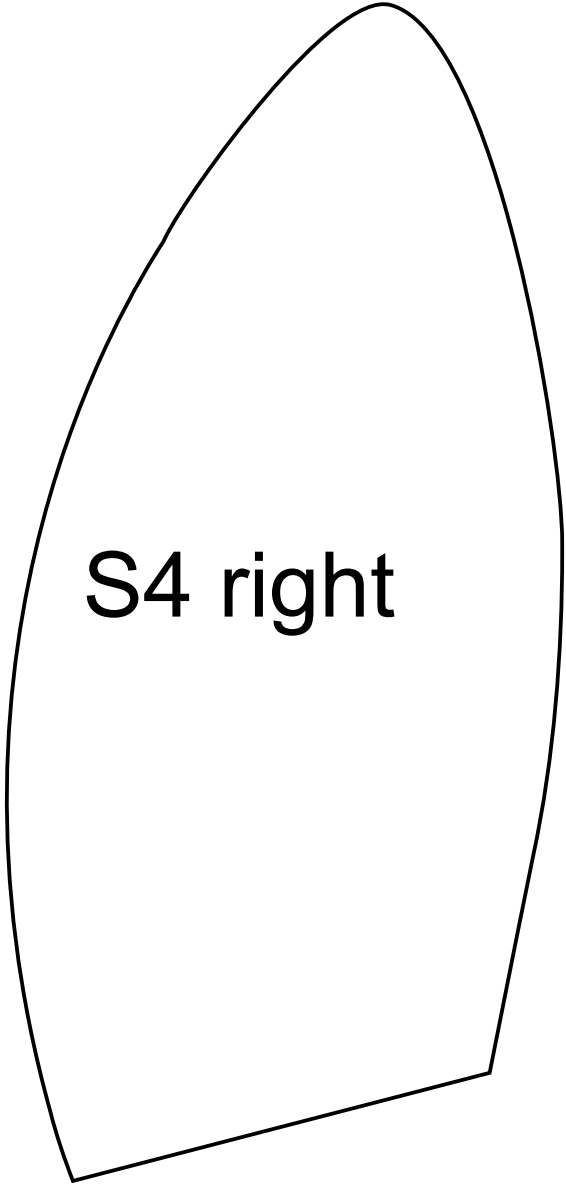

S3 left

S3 right

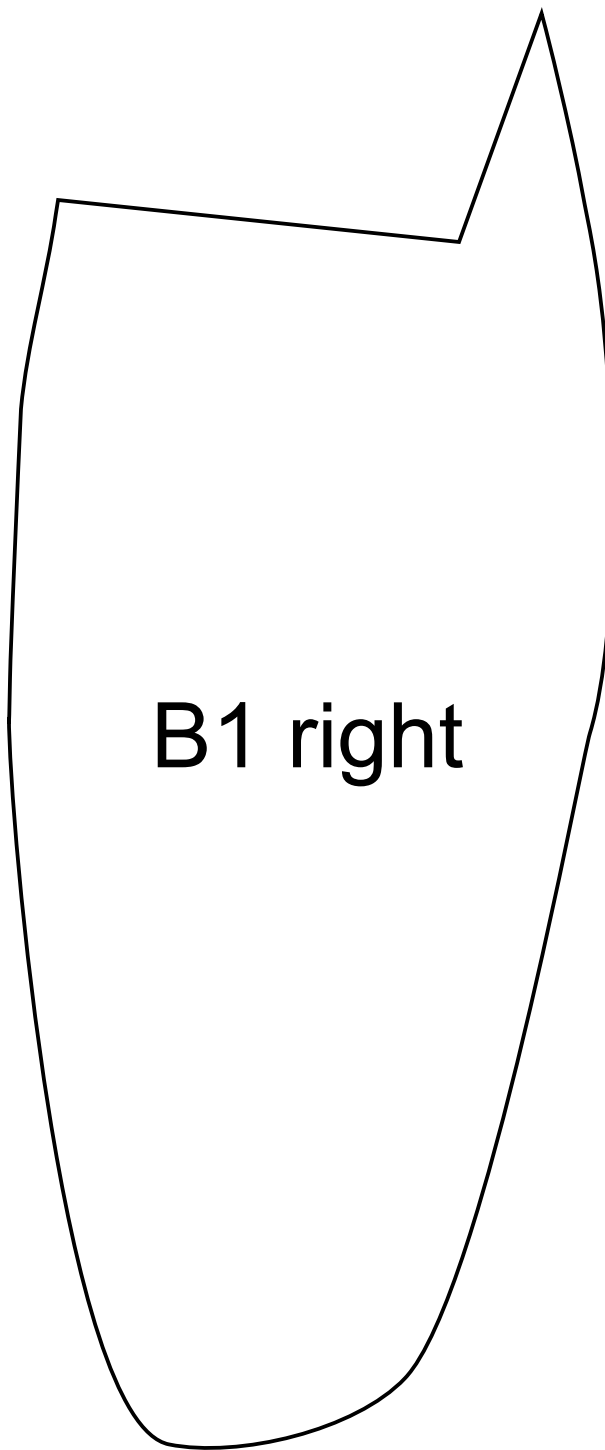

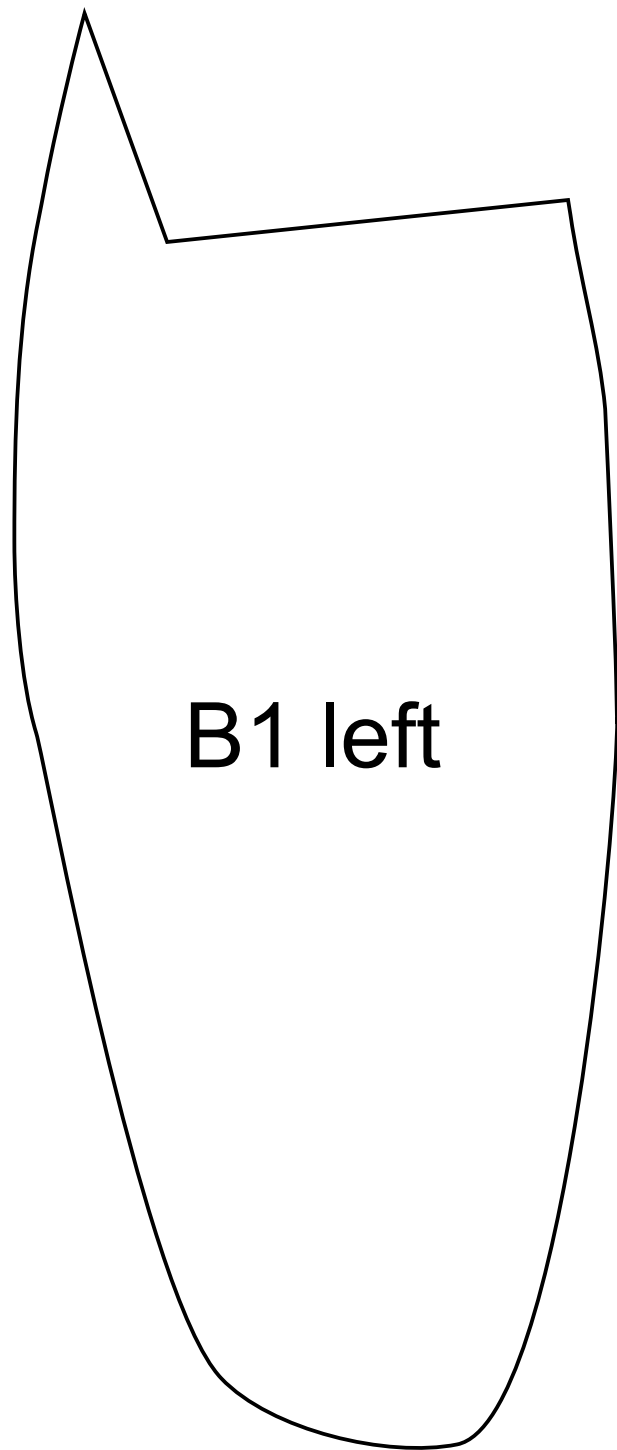

S4 left

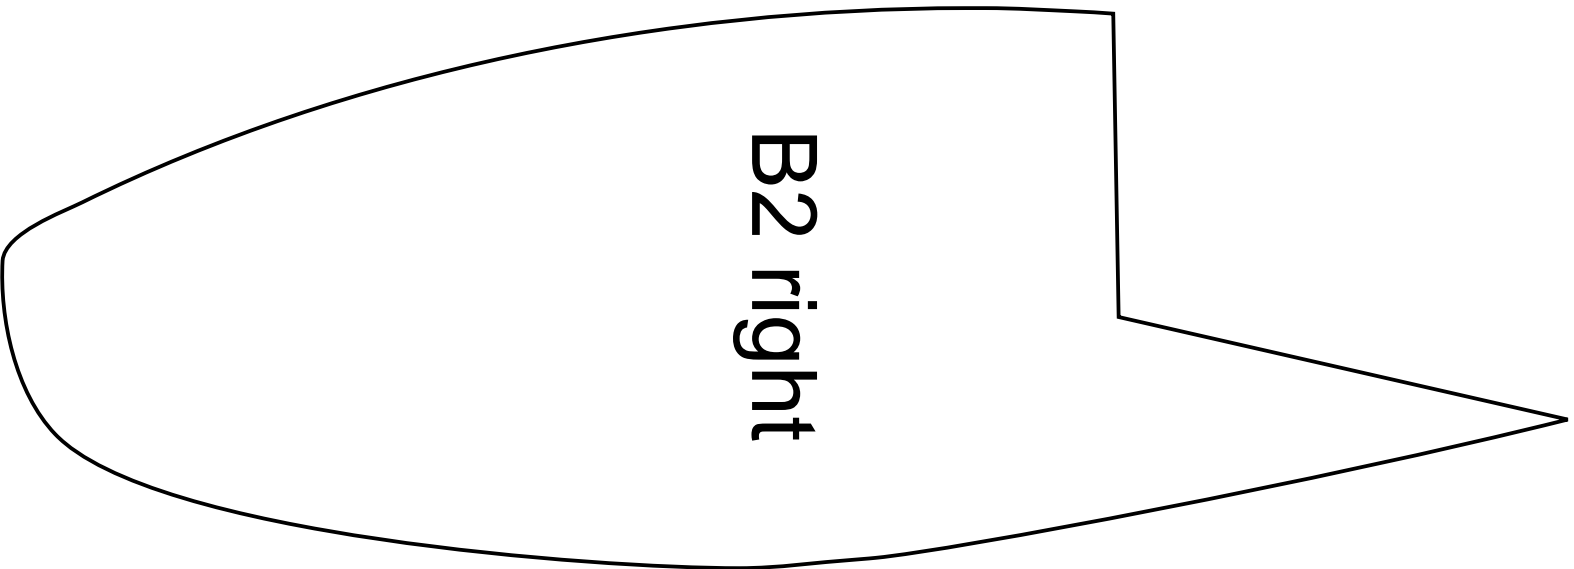

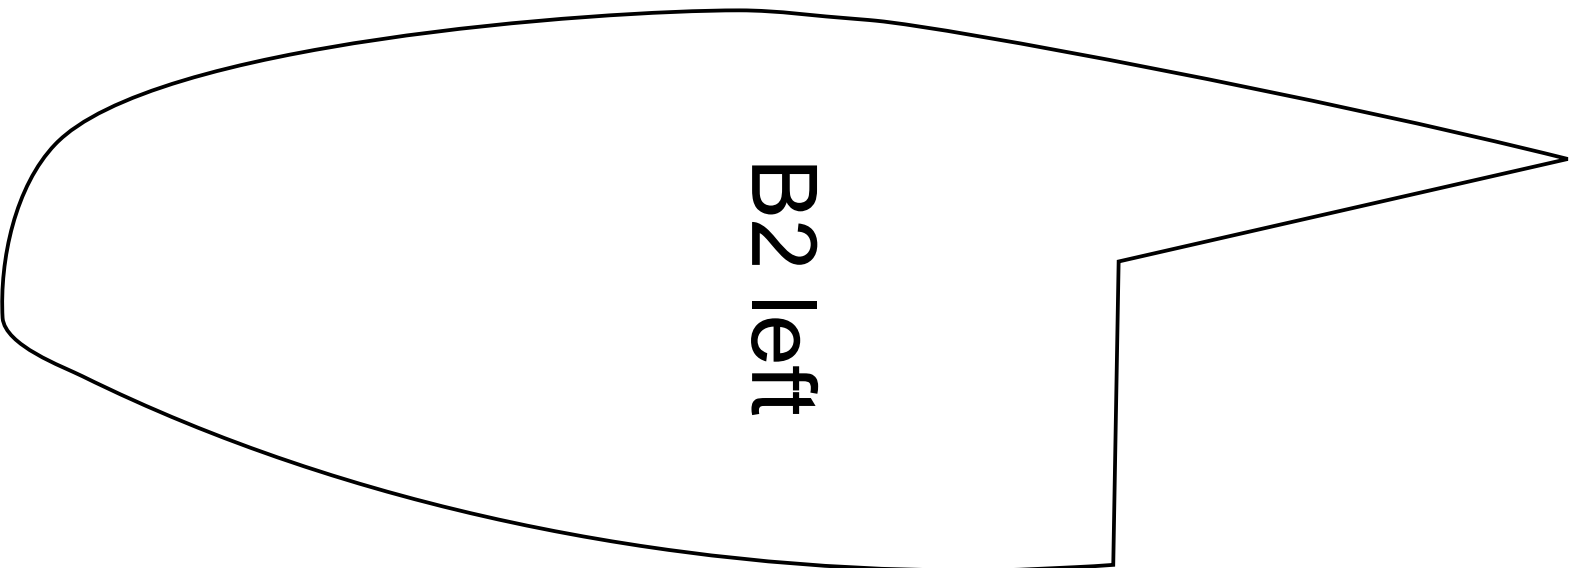

A diagram of a left S4 lobe, represented by a black outline of a teardrop shape. The shape is wider at the top and tapers towards the bottom. The text "S4 left" is centered within the shape.

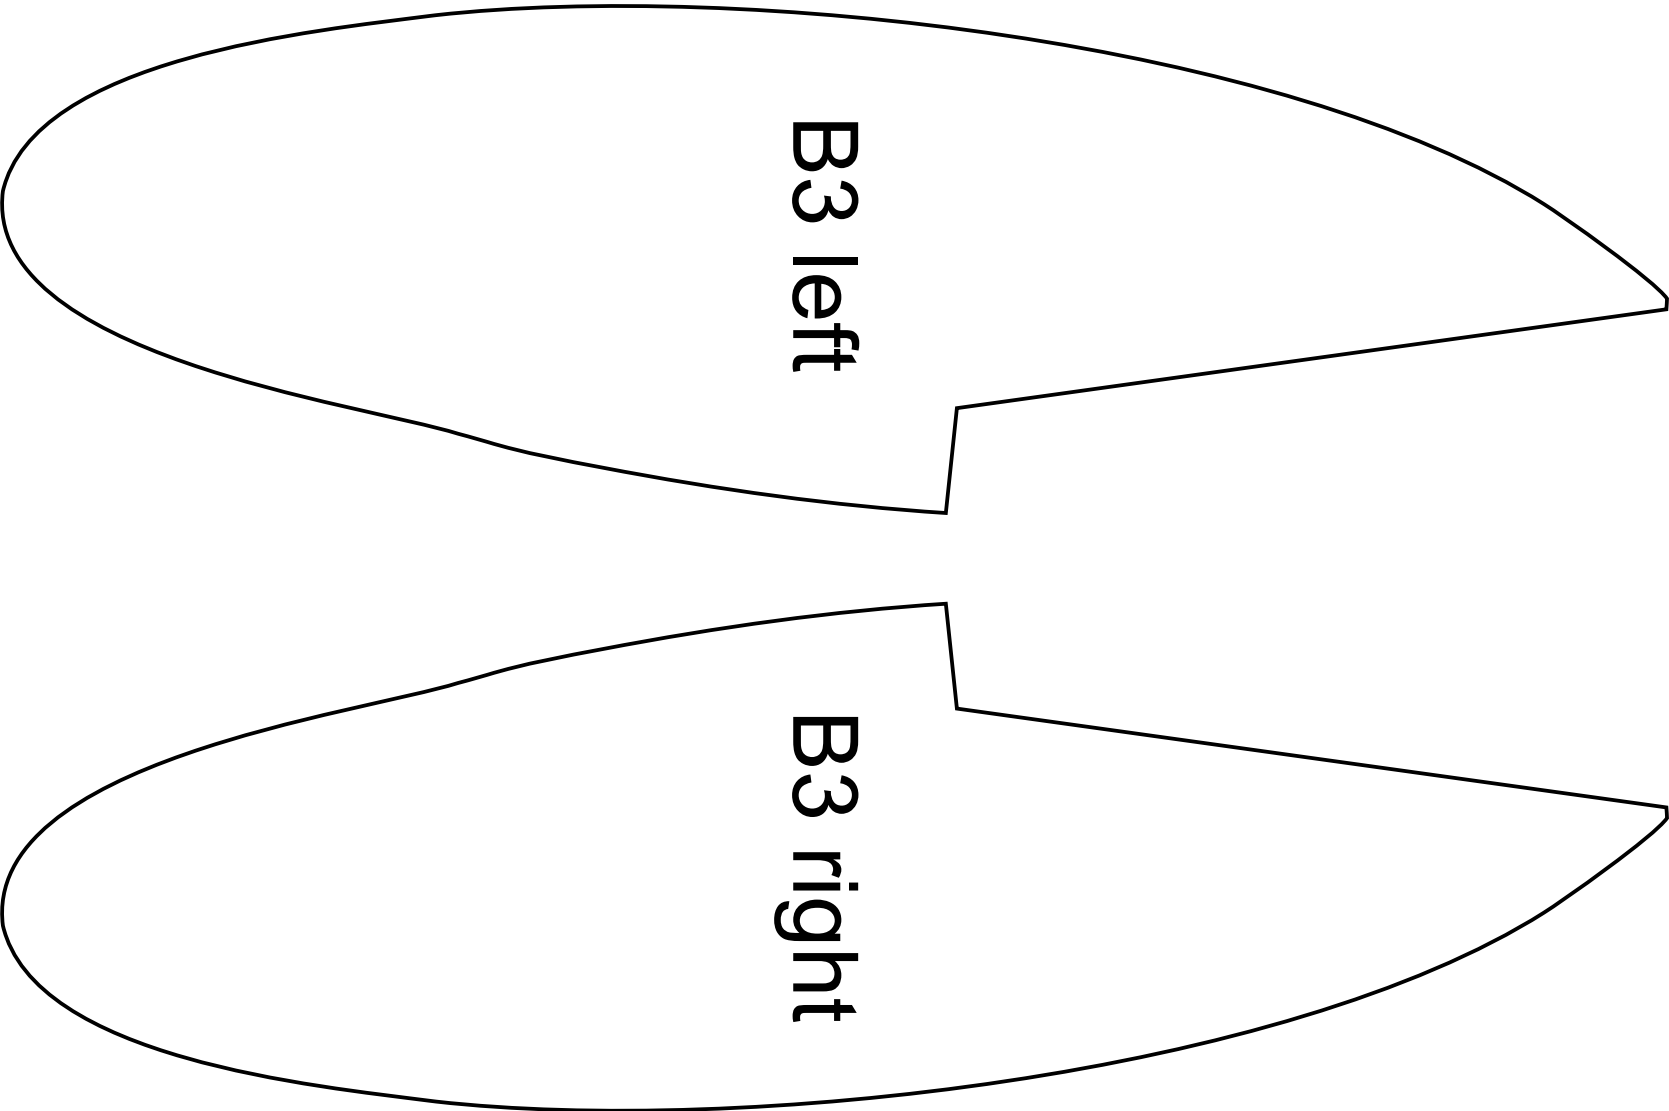

S4 right

A diagram of a right S4 lobe, represented by a black outline of a teardrop shape. The shape is wider at the top and tapers towards the bottom. The text "S4 right" is centered within the shape.

The diagram illustrates a complex geometric shape, likely representing a topographic feature or a specific area of interest. The shape is defined by a series of connected line segments, forming an irregular polygon. A label 'outline' points to the outer boundary of the shape. Another label 'toplines right' points to a specific line segment within the shape, which appears to be a horizontal line. The diagram also includes several other lines and points, suggesting a detailed analysis or measurement of the shape's geometry.
